

# SOLARIOUS

## SOLARIOUS — EXECUTIVE SUMMARY

Solarious Is A Layer-1 Blockchain Where Tokens Are Created From Real-World Solar Energy Production. Every Unit Of Value In The Network Is Tied To Verified Physical Output - Not Speculation. As Energy Scales, The Network Scales. As The Network Scales, Demand For SOLAR Increases. This Creates A Direct, Measurable Path:

What Makes Solarious Investable Is Not Just The Model — It's The Entry Point.

### The Opportunity (\$200K Allocation)

A \$200K Investment Secures:

- 2,000,000 SOLAR Tokens At \$0.10 Entry
- Access To Alpha Node Participation

**Alpha Nodes Are The Edge:** They Begin Generating Rewards From Day One And Operate At A **2.5x Earning Multiplier** Relative To Standard Nodes. This Means Investors Are Not Waiting For Market Appreciation - They Are Accumulating Position Immediately As The Network Activates.

### Why This Matters

At Minimum Scale (\$5M Raise), The System Is Expected To Reach ~\$20M-\$30M Valuation, Supporting A ~3x Outcome Within 6-8 Months. With Full Capitalization (\$15M Total), Solarious Unlocks Infrastructure Deployment, Enterprise Adoption, And Liquidity - Supporting A \$100M+ Valuation And ~10x Outcome Within ~12 Months.

### The Difference Is Not Speculation - It Is Scale.

The Edge

- Value Is Backed By Real Energy Production
- Supply Is Controlled And Expands With Infrastructure
- Demand Is Driven By Usage, Not Hype
- Alpha Nodes Generate Yield From Day One

### In One Line:

Solarious Is Where Infrastructure Produces Value, And Early Investors Don't Just Hold - They Earn While The System Scales.

We Are Currently Allocating The \$5M Syndicated Round (25 x \$200K Positions).
