

Solarious Hardware & Device Terms

Effective Date: 04/13/2026

These terms govern the use of Solarious-compatible hardware, including energy-producing devices and certified measurement systems.

1. Device Role

Solarious hardware enables:

- Measurement of real-world energy production
- Creation of cryptographic energy proofs
- Participation in Proof-of-Energy consensus

2. Certification Requirement

Only certified devices may participate.

Devices must:

- Include secure elements (e.g., hardware key storage)
- Produce verifiable telemetry
- Pass protocol-level validation

3. No Guarantee of Rewards

Energy production does not guarantee:

- Token issuance
- Reward levels
- Network participation

Rewards depend on:

- Verified output

- Network conditions
- Protocol rules

4. Data Integrity

Users must not:

- Tamper with hardware
- Manipulate sensor data
- Attempt to falsify energy output

Violations may result in:

- Permanent blacklisting
- Loss of rewards
- Removal from the network

(Aligned with protocol-level enforcement and anti-spoofing mechanisms)

5. Maintenance & Operation

Users are responsible for:

- Device installation
- Power systems
- Connectivity
- Compliance with local regulations

6. External Dependencies

Performance may be affected by:

- Weather conditions
- Grid availability

- Hardware degradation

7. Liability

Solarious is not liable for:

- Hardware failure
- Energy production variability
- Lost rewards

8. Updates

Devices and firmware may require updates for continued participation.
