

# Solarious Risk Disclosure Statement

**Effective Date:** 04/13/2026

Participation in the Solarious ecosystem, including use of its blockchain protocol, tokens, hardware systems, or related services, involves substantial risk.

This document outlines key risks but does not cover all possible scenarios.

## 1. Technology Risk

Solarious operates on emerging technologies, including:

- Blockchain systems
- Smart contracts
- Cryptographic verification
- Oracle-based data systems

These may contain:

- Bugs
- Vulnerabilities
- Design limitations

## 2. Protocol Risk

The Solarious Protocol may:

- Change over time
- Experience disruptions
- Fail to operate as intended

As stated in official materials, protocol parameters and architecture may evolve during development and governance processes.

## 3. Token Risk

The \$SOLAR token:

- May have no intrinsic value
- May be illiquid or volatile
- Is not backed by guarantees

Market conditions may significantly impact its price or usability.

## **4. Energy & Hardware Risk**

Solarious depends on real-world infrastructure:

- Solar energy production
- Hardware devices
- Data measurement systems

Risks include:

- Equipment failure
- Environmental variability
- Incorrect data capture
- Certification or compatibility issues

Since token issuance is tied to energy production, performance may fluctuate based on real-world conditions.

## **5. Validator Risk**

Participants operating validator nodes face:

- Infrastructure costs
- Operational complexity
- Risk of penalties or removal

Validator participation requires consistent performance and adherence to protocol rules.

## **6. Oracle & Data Risk**

The Protocol relies on external data inputs.

Risks include:

- Incorrect or manipulated data
- Oracle failure
- Verification discrepancies

Although safeguards exist, no system is immune to failure.

## **7. Regulatory Risk**

Digital assets are subject to evolving regulations.

Users may face:

- Legal restrictions
- Compliance obligations
- Tax liabilities

Regulatory changes may impact the Protocol or token utility.

## **8. Market Risk**

Digital assets are highly volatile.

Factors include:

- Market sentiment
- Liquidity conditions
- Adoption levels

Value fluctuations may be significant and unpredictable.

## **9. No Guarantee of Returns**

Participation in Solarious does not guarantee:

- Profit
- Yield
- Token appreciation

All outcomes depend on network usage and external factors.

## **10. Assumption of Risk**

By participating, you:

- Accept all associated risks
- Acknowledge potential loss of funds
- Agree to make independent decisions

## **11. Contact**
